)

Late Filed Hearing Exhibit 41

Duke Energy Progress, LLC responds as follows to the question regarding coal ash asked by a commissioner during the evidentiary hearing in this matter:

Revenues received from beneficiation and beneficial reuse of coal ash are used to reduce the coal ash deferred cost balance. Both the revenue and the costs are allocated to South Carolina retail based on production demand allocators. These allocation percentages fluctuate slightly from year to year. The production demand allocation percentages for South Carolina for the deferred balances included in this case range from 9.5% to 9.7% for Duke Energy Progress and from 23.1% to 24.1% for Duke Energy Carolinas.
